

STERILE DISPOSABLE SYRINGES

HELP MSF TEAMS TO PROTECT MILLIONS OF LIVES
EACH YEAR THANKS TO VACCINATION

Thanks to the purchase of sterile disposable syringes, you ensure that drugs are injected in total safety. Syringes are necessary to carry out vaccination campaigns against meningitis, measles, and other lethal illnesses. They are fitted with a safety device preventing from leakages and transmission of diseases by blood like HIV.

Apart from vaccines, thousands of syringes are used every year to administer anaesthetic products during operations and are also part of MSF first aid kits for tetanus vaccination.
